Sir:

In the Amendment filed on July 6, 2010, on page 5, the definition of "segment fineness" was improperly set forth.

Segment fineness should properly be calculated according to the following formula:

(Segment fineness) = $\{[(20d*20)+(60d*1)+(20d*2)+(60d*1)]/24\} * [10000/9000] = 25.93$, where $[10000/9000]$ is the coefficient to convert *denier* to *dtex*.

Respectfully submitted,
